Instructions

Find all the hidden words in the grid. Words can be horizontal, vertical or diagonal, in any direction. Cross off each word when found. Solutions at the back.

The word search puzzle is a relatively young invention: it was created by Norman E. Gibat, who published the first one in a puzzle-book called the Selenby Digest in Norman, Oklahoma, back in 1968. It caught on quickly because, unlike crosswords, it required no vocabulary knowledge — just sharp eyes. That "sharp eyes" skill is exactly why word searches are still recommended today: scanning a grid to spot a target word among distractors trains visual search and sustained attention, a skill that is one of the first to decline with age, which is why occupational therapists frequently use word search puzzles in cognitive rehabilitation programs.

Tip: Spending 15-20 minutes a day on cognitive activities improves concentration, memory and overall wellbeing.
