Instructions

Find the words, color the pictures and have fun. Ask an adult for help if you need it.

Activity books that mix several types of tasks — searching, coloring, tracing, matching — in one sitting are more than entertainment: research on "executive function," the mental skillset behind self-control, planning and following multi-step instructions, shows that switching between different types of small tasks helps children practice exactly those skills. That is why this book combines several activities instead of repeating just one.

Tip: Spending 15-20 minutes a day on cognitive activities improves concentration, memory and overall wellbeing.
